

iMRP500

intelligent mobile robot platform 500

iMRP500 Intelligent mobile platform owns rich functions (navigation, drawing & position) , which can satisfy the need of supermarket, hotel, office, hospital and factory, etc.

50kg

Max-Load

Battery Capacity **24V/20AH**

Max Ramp Angle **5°**

Trench Crossing Width **40mm**

Battery Charging **29.4V/7A**

Obstacle-Surmounting **10mm**

Navigation Accuracy **±5cm**

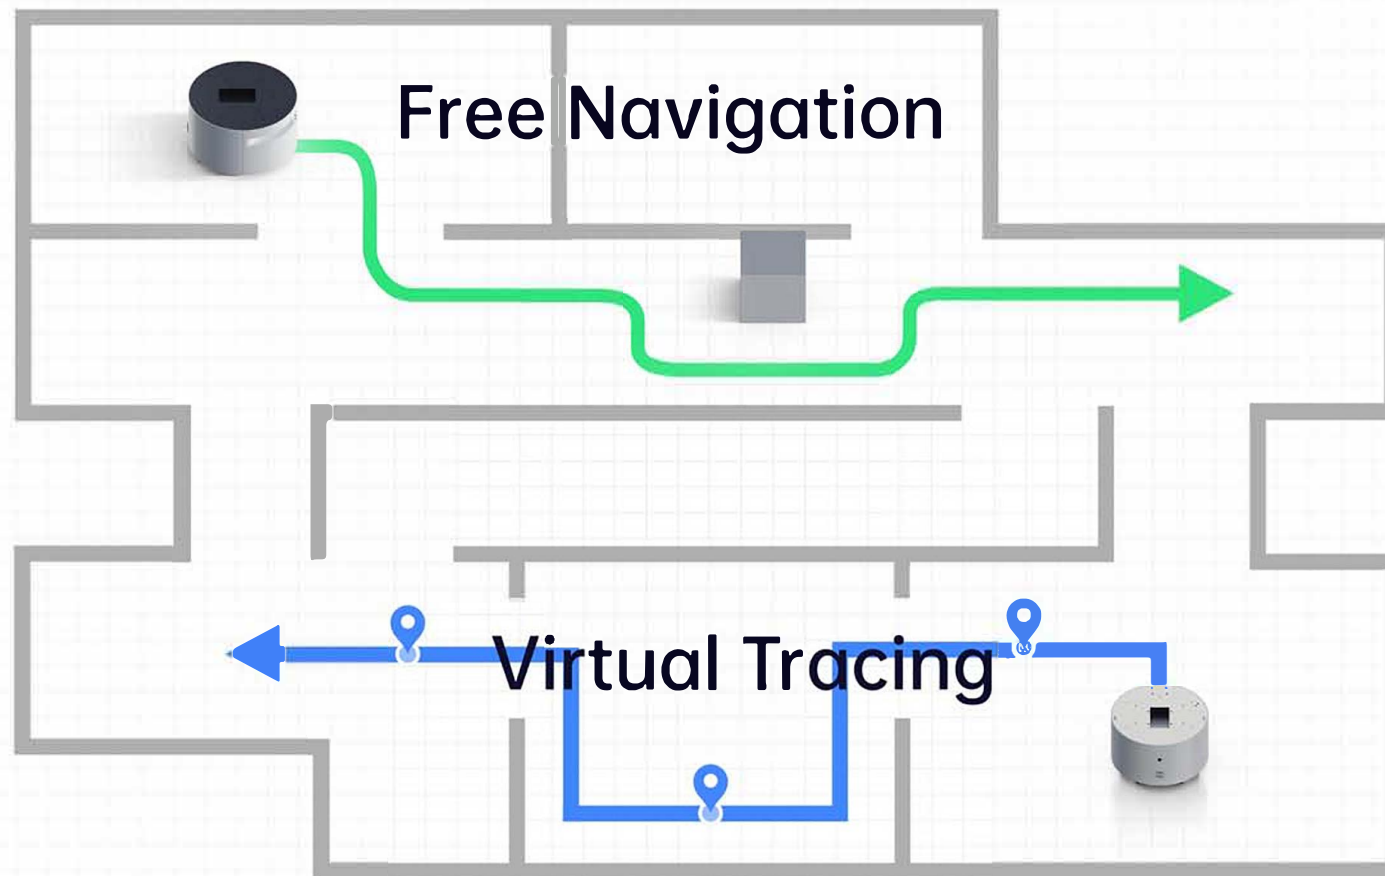

Size **500x500x310mm**

Net Weight **35kg**

Max-Speed **0.8m/s**

Drawing Area **30000m²**

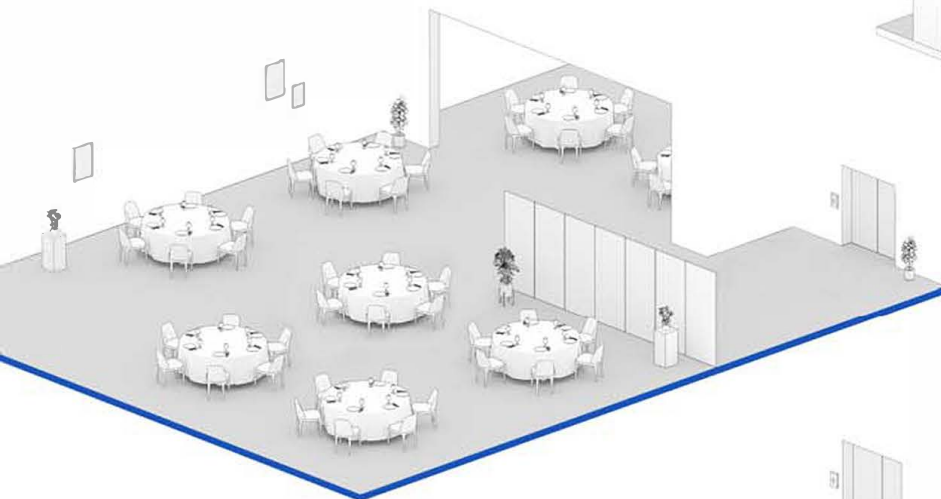

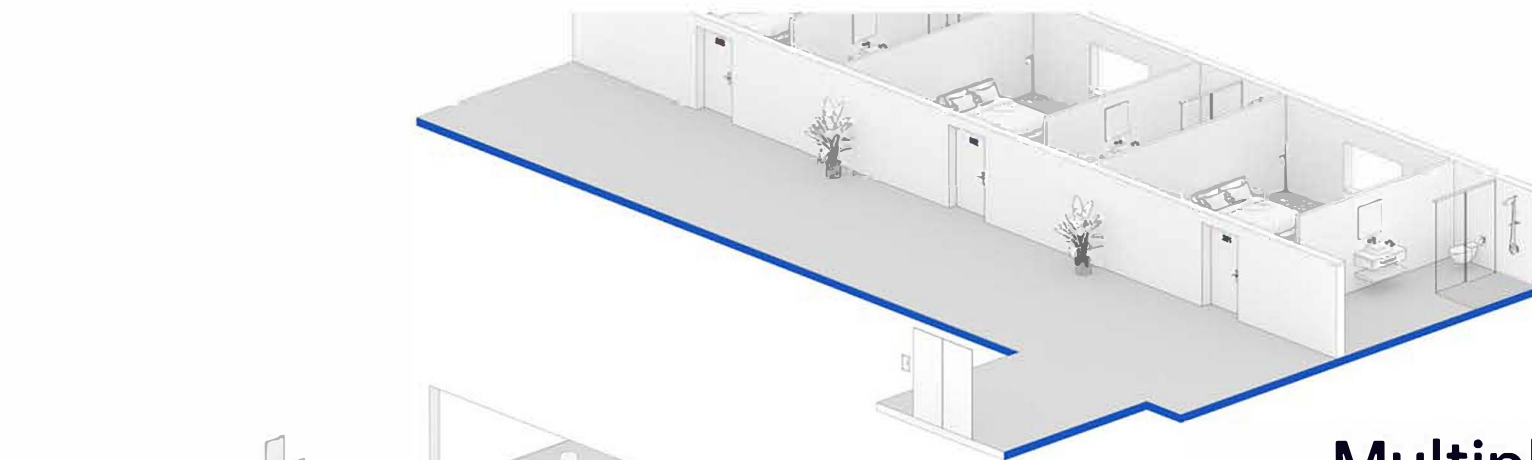

iMRP500 has two navigation modes(free navigation & virtual tracing), which is integrated with many sensors, such as lidar, ultrasonic waves and 3D vision to realize different navigation functions.

Multiple Sensors Integrated Project

iMRP500 is equipped with a laser radar and visual dual SLAM scheme that simultaneously integrates multiple sensors such as ultrasound, odometer and 3D vision to easily deal with different situations.

Multiple Drawing Modes Settle In Different Conditions

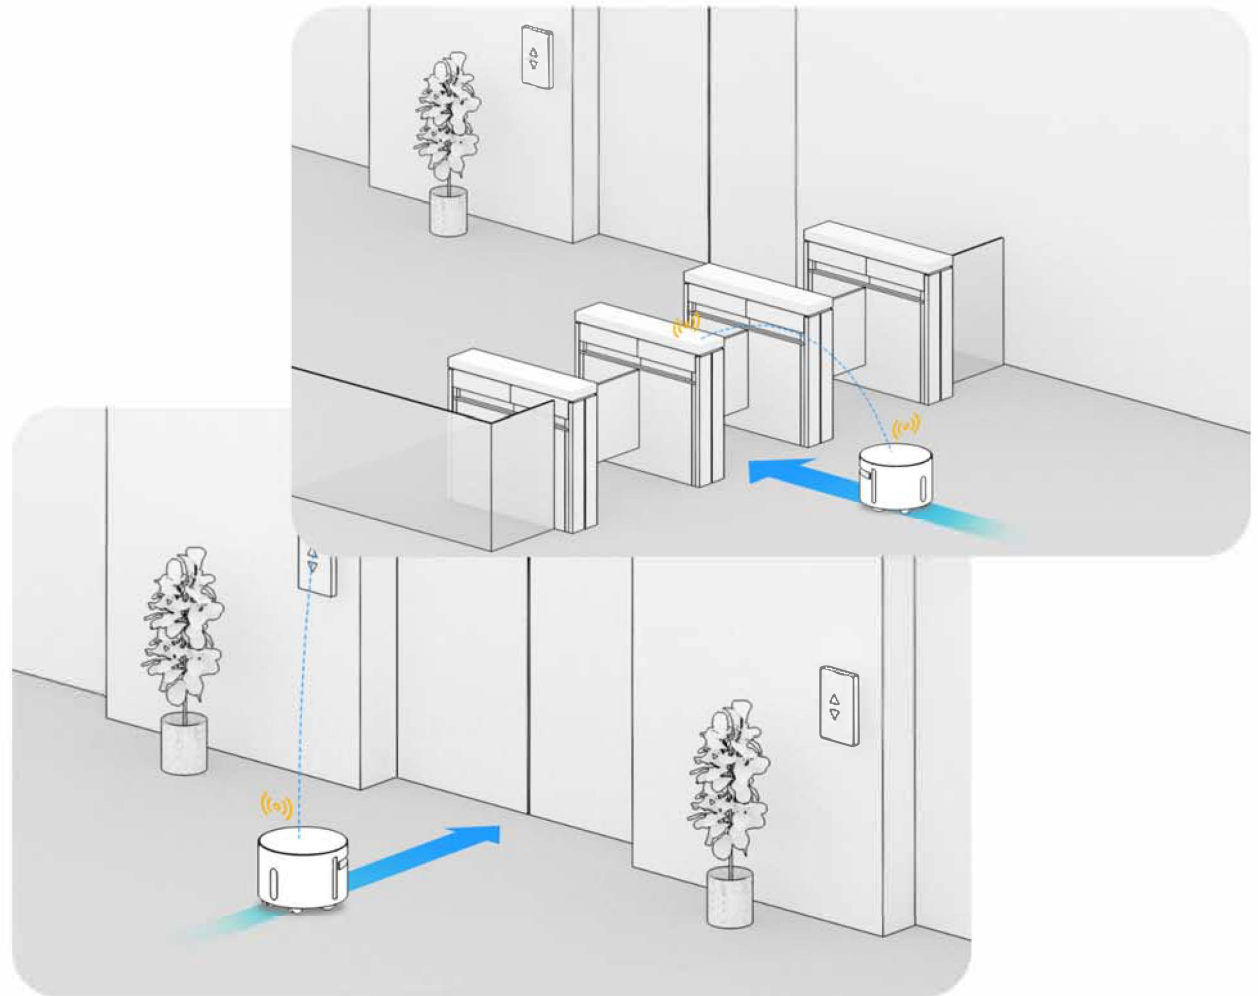

iMRP500 has three different modes(Standard mode, similar mode & condition mode). Meanwhile, it also has the function of continuous drawing, effectively improving drawing ability & position accuracy.

IOT

Control System

iMRP500 has the function of interlocking such as elevator control and access control, and gate machines, which can independently complete various tasks without nobody operation so as to improve operational efficiency and reduce labor costs.

Support Multi Machine Coordinated Jobs

iMRP500 supports cloud management & private development. According to the real needs, it can be quickly used in field, and dynamically adjust delivery path & navigation based on the priority of robot & mission.

Five-fold Active Safety Mechanism

iMRP500 has five-fold active safety measures to meet various safe operations and avoid safety accidents in elevators, steps, and other workshops.

The Fifth Barrier: **AI Vision**

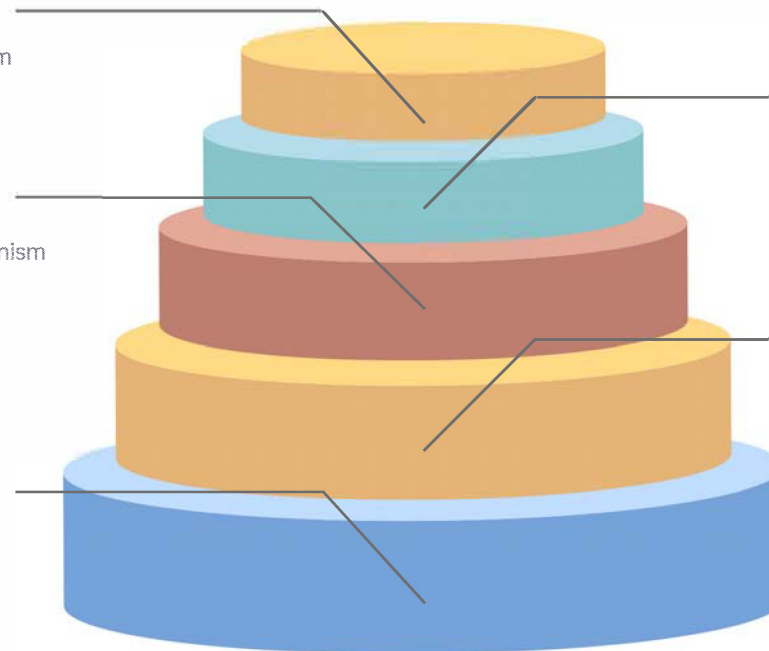

Multi scene Recognition and Relocation Mechanism

The Third Barrier: **Threshold Thermal**

Analysis of Map Matching, health Warning Mechanism

The First Barrier: **Active Safe Heartbeat**

Baseplate control safety mechanism

The Fourth Barrier: **Assistant Warning Line**

RGB-D Identification & Absolute Blocking Mechanism

The Second Barrier: **Virtual Wall**

Robot Virtual Fence

Robot Cloud Management Platform

The platform has more functions such as remote management, map management & alert remind. It uses light development to reduce maintenance cost. Meanwhile it can also control the data on the task, mileage & scene area to precisely master the robot's status.

Support Multiple Application Expanded

More expansion interfaces

Standard software and hardware interfaces support rapid secondary development for users

More software / hardware
interfaces

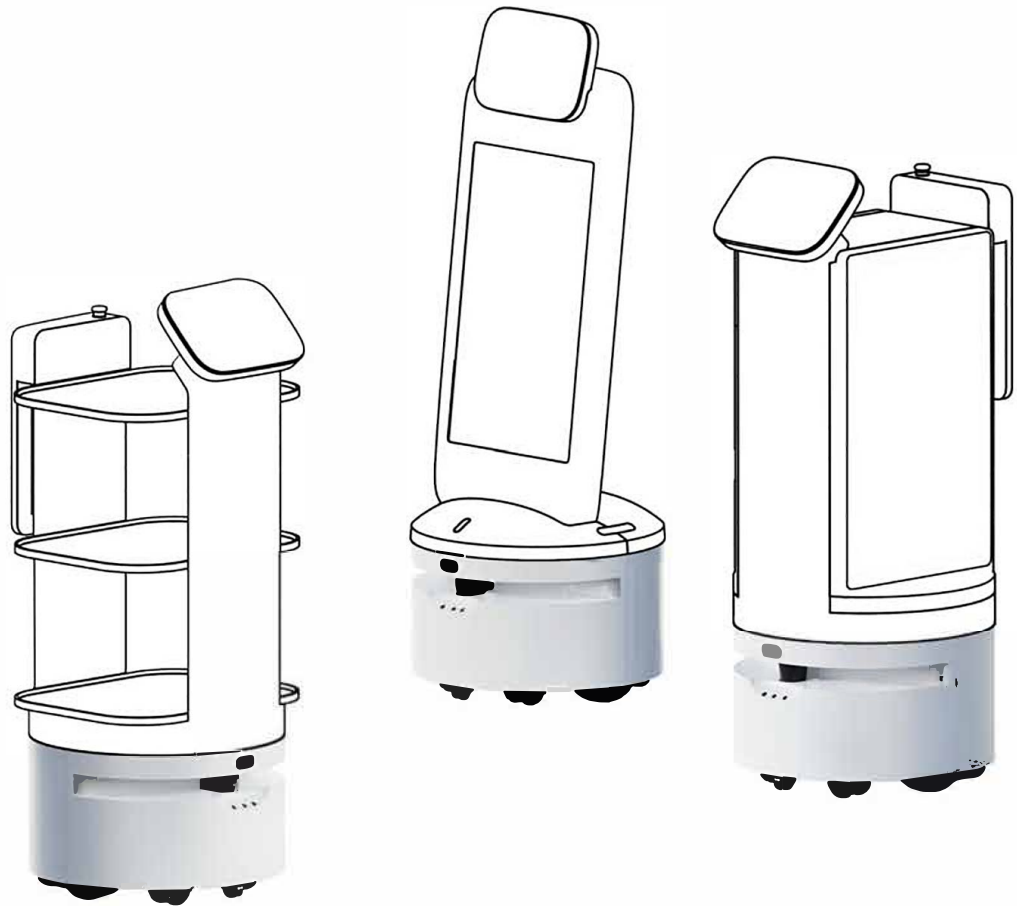

Support secondary
development

Customized services

Support OEM Manufacture

Based on personalized needs, iMRP500 is always available to assembly various robot bodies such as delivery, reception, cleaning and disinfection, security patrols. It can satisfy different customers' needs. CIOT has a professional production base, R&D center and maintenance team, which can provide customers with complete OEM services.

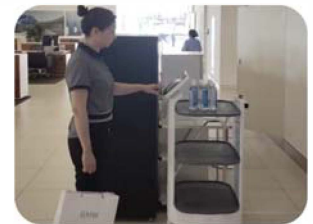

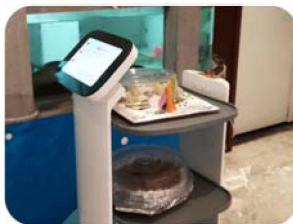

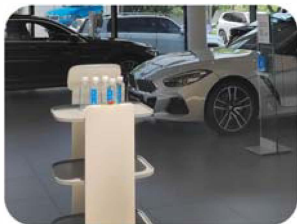

Example

R O B O - D 3

D3 Delivery Robot

iMRP500 is used for delivery robot in restaurant, hotel, KTV, office, supermarket, gym and other workshops.

Example

Photocatalyst Air Disinfection Robot

iMRP500 is made for disinfection robots which are mainly used in hospitals, pharmacies, governments, schools, and other crowded places to provide disinfection, epidemic prevention, and other services.

**Complete Strength From
Baseplate Supply To Customized OEM**

CIOT is a leading robot manufacturer with independant R&D, sales & service in China. It has applied for over 300 patents owning advanced technologies in different levels.

CIOT mainly focuses on the overall solution of service robots in intelligent buildings. It has set up more than 300 network bases with 50000 users of various types of buildings nationwide and has a large market share in office buildings, hospitals, supermarkets, restaurants, hotels, government halls, and exhibition halls.

Robot Types

Full supply chain, self-production + OEM mode
make sufficient capacity guarantee and energize
the entire industry.

Generally total cost has fallen by 40%
Assembly pass rate 95% & QA pass rate 99%
Capacity: 20% for OEM, 80% for self-production

Standard Production

System Certification

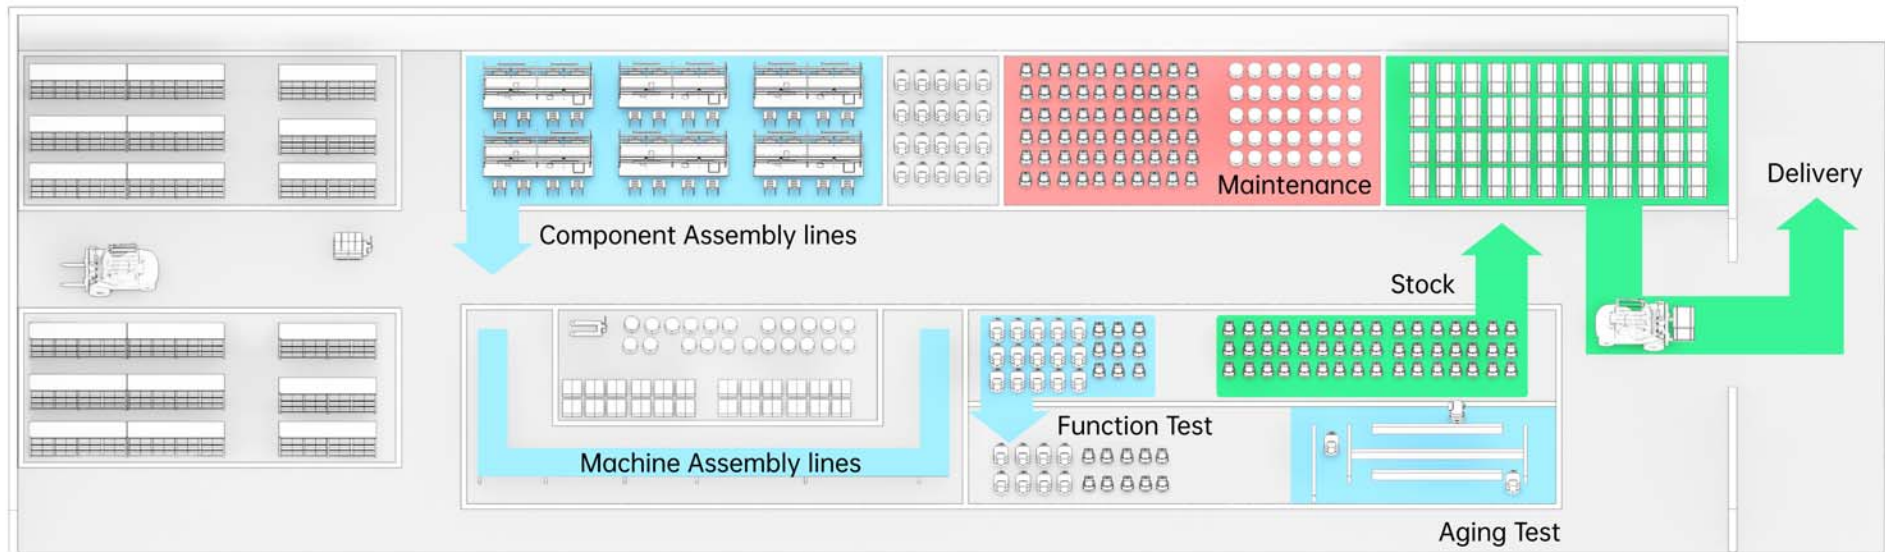

- ISO 9001:2015
- ISO 14001:2015
- OHSAS 18001:2007

Production Outline

- 3 Automatic Assembly lines
- 6 Component Assembly lines
- 1000m² Dust Free Workshop
- 3 Full Condition Test Lines

Capacity

- Daily Capacity 0.4K
- Monthly Capacity 10K
- Annual Capacity 100K

**Let Intelligent Technologies Serve Robot
Let Robots Serve The World**
